

## **Hello, and thanks for stopping by!**

At Full Tank we saw the need to deliver fuel to those who are up for enjoying the beautiful waters of Northern MN.

We have always heard,

“I hate dragging cans to the boat, or I hate waiting at the fuel dock”  
After helping a couple of our fellow neighbors we made the decision to offer our services to the lakes area delivering fuel to your dock.

Why waste your precious time either going to the fuel dock, or hauling those dreaded cans to the boat. Not to mention the balancing act to fill your boat while trying not to spill fuel at the same time.

We have all experienced those frustrations trying to come up with ways to make it easier, more efficient, and to make this daunting chore more manageable.

That's where we come in, we hold a current CDL with HazMat and Tanker endorsement required by the Department of Transportation to safely haul fuel on the roadways.

On our truck we carry 110 Gallons of 91 non-oxy fuel that has already been stabilized. Our on site delivery buggy has a 60 gallon capacity of the same fuel and 200 ft of marine fuel delivery hose. Once on site, we can drive our buggy to the docks edge and pull out the required hose to fuel up your watercraft, all while you enjoy your company letting us take care of your fueling needs.

What's next?

Use our QR code or give us a call to schedule your delivery and let us take the headache out of your fueling needs.
